

Oxygen Updater Privacy Policy and legal information

Last updated: May 26th, 2018.

Your privacy is important to the developer of Oxygen Updater. However, some user data needs to be collected to maintain the quality of service for this application.

Which personal information is collected?

The app itself only collects your current operating system version during use. If an error occurs, some additional - non-personal - information will be collected. Also, some of the services which the app uses collect personal information. These services include:

- Firebase (Analytics, Ads and Cloud Messaging): Firebase is used to show ads and to deliver push notifications. Firebase Cloud Messaging stores a unique token of your device (Instance ID) in order to send push notifications. This token is kept during the lifetime of the application and will (currently) not get removed. Firebase Ads uses your per-device ad token to show relevant ads. See the Firebase privacy policies for more information: [Google Ads](#), [Firebase Analytics](#).
- Google Play In-App Billing: Used when you purchase the ad-free version. If you purchase the ad-free version, your personal details are stored by Google, but are not fully visible to the developer of the app. Visible details will not be used other than for refunding a purchase. For more information, visit the privacy policy of Google Play Store: [Google Play Terms of Service](#) . By using the Google Play store, you agree to the terms and conditions as stated in the Google Play Terms of Service.
- Whenever a crash or an abnormal situation (failure to connect to server, error parsing data etc.) occurs, Oxygen Updater will send a Log Report to the Application Server. Crash reports don't include personal information. They only contain information about your selected device and update method, as well as your operating system version and the actual error message.

How can I decide which information is collected?

- The error logging feature can be turned off in the settings screen of the app. If you turn it off, no error logging will take place.
- You can turn off the push notifications in the settings screen of the app. This only affects the displaying of the notifications. Your device will still be registered with Firebase to support receiving push notifications. This might be changed in a future version of the app. *As of writing, the latest version of the app is 2.4.3.*
- You can select to opt-out of personal ads in the settings app of your device. The Google section contains an option to opt-out of personified ads.
- You cannot decide which other information gets collected, as you'll either see ads (for which Firebase may collect personal information) or have to buy the ad-free version (in which Google In-App-Billing stores your personal information).

Legal information

The Application is not an official application from OnePlus or OPPO. You agree to use the Application at your own risk. The Developer of the Application is not responsible for any damage done to your device, your computer or any other property.

OnePlus, and OPPO are the legal owners of OxygenOS. Visit <https://oneplus.net/about-us> to view information about OnePlus.

Android is a registered trademark of Google Inc. Visit <https://www.android.com/> for more information about Android.

Google Play and the Google Play logo are registered trademarks of Google Inc.

Open Source content

This app uses the following open-source third-party add-ons:

- Joda Time: <http://www.joda.org/joda-time/>
- Jackson JSON processor: <http://wiki.fasterxml.com/JacksonHome>
- Android Action Bar Style Generator: <http://jgilfelt.github.io/androidactionbarstylegenerator/>
- Android asset studio: <https://romannurik.github.io/AndroidAssetStudio/>
- RetroLambda and StreamSupport

All licenses of open source content apply.
